

BLOOD COLLECTION TUBES

Blood Collection Tubes comes with various sizes, with color coded tops indicating tube contents. Most blood collection tubes contain an additive that either accelerates clotting of the blood (clot activator) or prevents the blood from clotting (anticoagulant).

Mini Blood Collection Tubes are ideal for collecting, transporting capillary blood. Capillary blood collection is especially recommended in patients with fragile veins, young children, geriatric children and in situations where only a small blood sample is required.

PICTURE	COLOR	ADDITIVE	ROLE OF ADDITIVE
	Purple / Lavander	EDTA (Ethylenediaminetetraacetic Acid)	Removes calcium preventing clotting of blood
	Light Blue	Sodium Citrate /9NC	Binds and remove calcium to prevent blood from clotting
	Green	Lithium Heparin Sodium Heparin	Inhibits Thrombin formation to prevent clotting
	Red	Plain Tube or contains silica particles which act as clot activators	Clot activator promotes blood clotting with glass or silica particles
	Yellow Top	Anticoagulant SPS (Sodium polyanetholsulfonate) and ACD (acid citrate dextrose)	Prevents the blood from clotting and stabilizes bacterial growth
	Black	Sodium Citrate	Forms calcium salts to remove calcium

COLOR	DESCRIPTION	PACKAGING
Blue Top	0.5 ml, Rubber Cap	100 tubes per box
	ESR, Sodium Citrate 3.8%, 0.2 ml with Pipette	100 tubes per box
Green Top	0.5 ml, PP Cap	50 tubes per box
Purple Top	K2 and K3, 0.5 ml (PP and Rubber Cap)	50 tubes per box
Red Top	0.5 ml, PP Cap	50 tubes per box
Yellow Top	Clear Tube, 0.5 ml (PP Cap)	50 tubes per box
Yellow Top	Amber Tube, 0.5 ml (PP Cap)	50 tubes per box
Black Top	Glass, 2.4 ml	50 tubes per box
Yellow Top	Glass, 4 ml	50 tubes per box
Yellow Top	PS, 4 ml	50 tubes per box
